

SOCIAL NETWORK-BASED INTERNET SEARCH ENGINE

ABSTRACT OF THE DISCLOSURE

Filtering Internet content includes receiving a search query message comprising a search query to an Internet search engine. Data is received from the Internet search engine,
5 responsive to the search query message. Filtering of the data produces a data subset. The filter selects data for inclusion in the data subset based upon occurrence of the data in a database. The database includes content selected for inclusion by designated users. The data subset is displayed in a browser.
